

- 1.Created 4 java files: WebDriverLaunch.java, BaseTest.java, AdminPage.java and Login.java.
- 2.In WebDriverLaunch class, Set the preconditions for running the test case and initialized the browser with the use of @BeforeSuite, @BeforeMethod and @AfterSuite testing annotations.
- 3.In Login class, wrote the code for login to the site using the provided credentials.
- 4.In AdminPage class,using the pagefactory performed all the steps of deleting a product and confirmation regarding the same.
- 5.In BaseTest class,we inherit WebDriverLaunch class and passed all the credentials for login to the website.Also passed all the required data for the AdminPage class to process the deletion of Push Notification.
- 6.Properties file stores the login credentials and also Adminpage's data which is required.
- 7.In Drivers folder,chromedriver is kept.
